

transactionSHUTTLE™

SIMPLIFIED, AUTOMATED SAP DATA LOADING AND EXTRACTION

Managing the consistency, accuracy, and timeliness of data in your SAP system is critical to keeping businesses running efficiently and profitably. However, moving critical information in and out of data-intensive SAP transactions is typically time consuming, costly, and error prone. Companies need a convenient, timely, manageable, and maintainable data entry solution.

Winshuttle's transactionSHUTTLE records the steps that a user takes to complete any SAP transaction and maps the relevant SAP fields to an Excel spreadsheet, easily creating a SHUTTLE file that can act as a transaction template. This template can then be run to shuttle data between Excel and SAP, automating any process, while using native SAP security and authorizations to ensure regulatory compliance. transactionSHUTTLE transforms business processes for both implementation and post production projects, including SAP data import, SAP data entry, SAP data quality, and SAP data integration.

transactionSHUTTLE greatly simplifies the automated uploading or downloading of SAP ERP data using Excel and Access. To the SAP Business Suite, data loading from transactionSHUTTLE is the same as manually entering the data at a very fast pace. To the user, transactionSHUTTLE software involves three easy steps: Record, Map, and Run.

“transactionSHUTTLE gives us the ability to do things we weren't able to do before. We have significantly reduced our manual data entry costs, reduced headcount, and minimized the burden on IT.”

- Paul Cahill, Director of Information Technology, Hubbell Wiring Systems

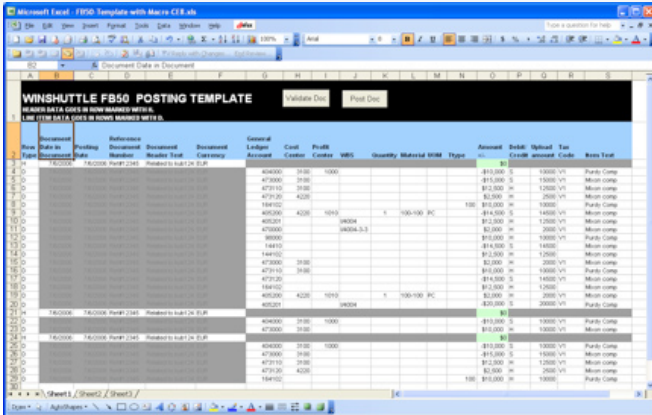

Key Features of transactionSHUTTLE:

- Record, Map and Run Wizard
- Intuitive User Interface
- Batch, Non-batch (Enjoy) or GUI Modes
- Automatic Data Backup
- Logical Branches
- Looping
- Real-time Uploading
- Preserves SAP Security
- Chaining
- Error Management

Key Benefits of transactionSHUTTLE:

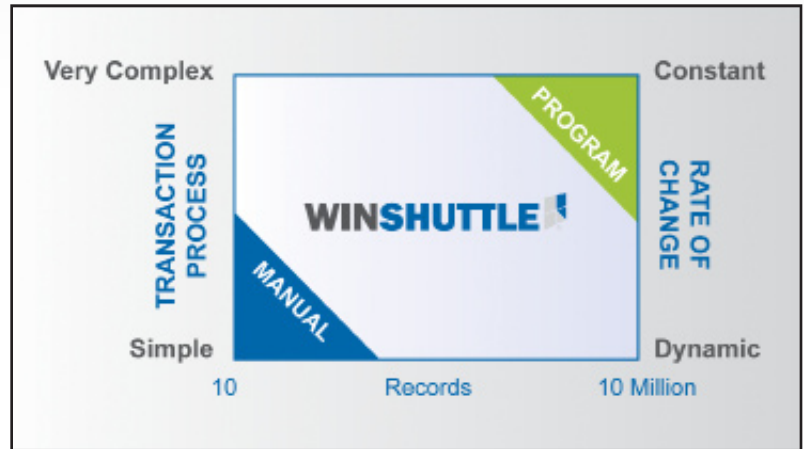

- Business users can upload their data into SAP with minimal training
- Non-technical users can easily set up SHUTTLEfiles
- Various modes allow you to record any SAP transaction
- Prior to making data changes, existing SAP data is automatically backed-up, allowing you to roll back changes if needed
- Adjusting to variable records permits one script to handle multiple types of data
- Creates a repeatable process that can be automated
- Allows users to keep the Excel file open while processing the upload so SAP results can be seen in real-time
- Protects transactions and data from unwanted access and use
- When business processes require multiple transactions to run in a certain order, you can link multiple uploads
- Errors in the data are immediately flagged in the Excel file and can be easily corrected and reprocessed

Winshuttle, Inc. is the leading provider of data entry and data download tools for SAP users worldwide. Winshuttle's products, transactionSHUTTLE and querySHUTTLE, replace manual data input and complex technical tools by easily and securely shuttling data between Microsoft Excel or Access and SAP without programming; effectively bridging the needs of business users with the governance requirements of IT. The Winshuttle tools transform business processes for both implementation and post production projects, including data import, data quality and data integration. Managing SAP data has never been simpler for the hundreds of Global 2000 companies that rely on Winshuttle. Headquartered in Bothell, Washington, Winshuttle has offices in the United Kingdom, France, and India. For more information visit <http://www.winshuttle.com>, email info@winshuttle.com or call 1-800-711-9798 in the United States or +800 27 00000 9 in Europe.

Microsoft Office Excel file format for journal voucher document creation with transactionSHUTTLE showing multiple general ledger documents in a single Excel sheet.

Winshuttle solutions allow business users to convert data to information. Nobody should have to manually re-enter more than 10 records of electronic data into their enterprise systems.

transactionSHUTTLE is available in two options for easy deployment among business users. The first option is the full transactionSHUTTLE solution which allows the creation and editing of the Record, Map and Run process and would be generally used by super users and business analysts. The second option is a run-only version of transactionSHUTTLE, runSHUTTLE™, which allows any authorized SAP user, regardless of their familiarity with the SAP transaction, to securely move data between Excel and SAP using predefined transaction templates. Once the transaction or business process has been recorded and mapped, the runSHUTTLE application takes over. Errors in the data are immediately flagged in the Excel file and can be easily corrected and reprocessed.

transactionSHUTTLE and runSHUTTLE tools are being used by hundreds of SAP users worldwide to integrate Excel with their SAP solutions. Companies such as B. Braun Medical, Canada Post, Hubbell, Medtronic, Under Armour, and Wales & West Utilities have been using transactionSHUTTLE to realize vast productivity improvements with quantifiable cost and time savings.

System Requirements

- | | |
|----------------------------------|------------------------|
| Windows XP/2000 or higher | SAP |
| • 250 MB disk space | • SAP 4.6C or higher |
| • 512 MB RAM | • RFC Authorizations |
| • Internet Explorer 5.5 or later | • SAPGUI 460 or higher |
