Successful SCM processes start with high quality ERP data

15 December 2015

Q: Which version of SAP does Winshuttle support?

A: Winshuttle products work with SAP versions 4.6c upwards.

Q: Can you post into SAP using multiple t-codes, using one web based form?

A: Yes. Multiple transaction codes can be automated with Winshuttle and used on a single web form or Excel template as linked scripts.

Q: On the approval step, is there the possibility for the approver to see what is changed on the already existing data?

A: Yes, this functionality can be included in the solution:

- In an Excel based workflow with Excel rules
- In a form based workflow using the Winshuttle tool for building forms to implement this.

Q: Can we create a query from a structure table?

A: Not really. Structures are dynamic tables that are created during the execution of a Transaction code in SAP and are not stored or exist in SAP. But Winshuttle can create queries for tables, infosets, SAP queries or logical databases.

Q: How is the workflow approval traceable in SAP? (The reason for this request is due to SOX requirements)

A: The audit trail of the workflow will be in Winshuttle workflow (SharePoint based app) so that is what will be used for SOX audits. Also if a structure to store this audit trail exists in SAP, it could be updated from a Winshuttle form to also store in SAP. We have customers like Coca-Cola, Nike and J&J, that use our products and are SOX compliant.

Q: Are the email notifications integrated with MS Outlook?

A: Yes. Email notifications are easily integrated into a process workflow and are delivered using MS outlook. You can also configure them to contain attachments of Excel files or web forms.

Q: Does the Winshuttle tool provide a plug-in into SharePoint?

A: Winshuttle Enterprise is installed on your existing SharePoint platform. This is not a plug-in but additional form and workflow functionality for SAP specific processes which can be simply installed and used alongside all of your existing SharePoint investments.

Q: Is a SSO connection allowed from Winshuttle to the SAP system?

A: Yes, Single Sign On is fully supported by Winshuttle. You can access the white paper via this link: http://www.winshuttle.com/assets/white-paper-winshuttle-single-sign-on-sso/

Winshuttle provides software products that improve how business users work with SAP. For customers who struggle with rigid, expensive and inefficient processes that limit their ability to adapt to changing business conditions, Winshuttle has the solution.

The Winshuttle Platform enables customers to build and adapt Excel and SharePoint-based interactive forms and workflows for SAP without programming. Thousands of Winshuttle customers have radically accelerated SAP processes, saving and redirecting millions of dollars every day.

Winshuttle supports customers worldwide from offices in the United States, United Kingdom, France, Germany, and India.
