Q: Does Winshuttle have any data extraction capabilities?

A: Yes. Winshuttle has capabilities to extract data from the database tables into an excel template. You can use this for ad-hoc reporting or also for data cleansing where you can download the data into a template, make changes to that data and update it back to SAP using an update script. Winshuttle has a patented technology which throttles the data extraction based on the resources available in SAP so that the SAP system performance is not affected at any time.

Q: Do you have any kind of templates ready to use for some of the most common transactions?

A: Yes, for finance journal postings, Winshuttle provides a standard set of templates which are ready to use and can be mapped to an existing or a new template.

Q: How about authorizations?

A: Winshuttle respects SAP authorisations at all times. Hence, you can only do data create, update or extraction from SAP for the objects, t-codes and organisation elements you have access to in SAP.

WINSHUTTLE®

Founded in 2003, Winshuttle is a global company with sales and support offices worldwide. For more information about Winshuttle solutions or to contact a representative near you, please visit www.winshuttle.com.
