

Introducing Winshuttle Foundation v11.1

12th October 2016

WINSHUTTLE™

Q: Does Foundation replace Studio? If so, can Studio licenses be transferred to Foundation?

A: Foundation does not replace Studio. Studio is the key user product which is used to automate transaction, design queries and build the excel templates and forms for data management. Foundation is the server product for the workflow execution, user governance and server side execution of data to SAP.

Q: How easy is it to learn how to set up and use Excel workflow?

A: The workflow product by Winshuttle is called Composer which uses a graphical user interface to model workflows without programming. A user who understands the end to end business process can easily put together a workflow. For users who have worked on Visio, it's a similar user experience to use the Winshuttle Composer. We recommend a training of 2-3 days for the workflow product.

Q: Will the dropdown list in Excel automatically synchronize with the lists in SAP?

A: We can provide an F4-style look up functionality to the fields to help users fetch values from SAP. As an alternative, data for the lookup can be made available on excel and this data can be extracted from SAP using the Query capability of Winshuttle.

Q: The application records the modification of Excel document by field, value, user and date?

A: The application records the user, date attributes of who changes the excel and who's working on it. At a field level, the excel cells will have to be promoted to SharePoint to view the changes made. This needs to be built into the design of the solution.

Q: We have foundation v10 "implementation phase" is there any cost to upgrade to v11.1?

A: There is no cost to the new version of foundation if you are under the support and maintenance of Winshuttle. However, do get in touch with your account representative to understand more of the migration plan and steps. There may be a cost depending on any services engagement from Winshuttle to do the migration.

Q: Is this excel workflow part of Winshuttle Transaction?

A: The excel templates for data upload are designed using Transaction which is a part of Winshuttle STUDIO. The workflow design and execution is a part of Winshuttle Foundation.

Q: How do you handle an installation? How long time etc.?

A: The Foundation Solution (Forms and Workflow) has many components that need to be installed on SharePoint as well as a Server and has some pre-requisites. Before giving an indication of timings

for installing foundation an understanding of the current landscape is required. Please reach out to us for more detailed information.

Q: What is the price of Studio Runner license and Foundation Runner license?

A: Please contact your Winshuttle Account Manager for detailed information regarding licensing and pricing or email infouk@winshuttle.com.

Winshuttle provides software products that improve how business users work with SAP. For customers who struggle with rigid, expensive and inefficient processes that limit their ability to adapt to changing business conditions, Winshuttle has the solution.

The Winshuttle Platform enables customers to build and adapt Excel and SharePoint-based interactive forms and workflows for SAP without programming. Thousands of Winshuttle customers have radically accelerated SAP processes, saving and redirecting millions of dollars every day.

Winshuttle supports customers worldwide from offices in the United States, United Kingdom, France, Germany, and India.
