Q: Can the webform created be directly uploaded to SAP?

Yes. The webform designed using Winshuttle COMPOSER will have direct integration to SAP. In the demonstration, we show a button that a user clicks on that will call a webservice to load or extract data to and from SAP. However this step can be automated using a plug-in provided in the tool where the SAP integration is seamless without any user interaction.

Q: We bought Winshuttle some years ago, and now we have installed version 10.7. How can we have the add-in in Excel?

Everything show in the webinar is the latest release, 11.2. The Excel add-in did work for version 10.7 as well. It gets automatically installed when you install Winshuttle Transaction or Winshuttle Studio. You need to have admin access to do that as there's a registry setting that gets turned on within Excel for that add-in to come through.

You also have a free upgrade to 11.2 so we recommend for those of you working on the 10.x version of our software please do take the chance to upgrade to 11.2 which gives you a lot more features and functionalities.

Q: Can we also record a customer text in a quotation or contract?

The feature show in this webinar about having long text data is predefined for a list of transaction codes. So what'd we'll do is provide you with the article on how many transactions we support today and that's growing. We'll be building more and more text objects, but if the contract or quotation data is not maintained in there you will have to record it using the SAP text editor or use the query scripting mode.

More information on the list of transactions for which this feature will work:

<http://winshuttle-help.s3.amazonaws.com/studio/en/connect-sap/help/11/Record-long-text.htm>

Q: Can you build approvals into the web forms?

Yes you can. Today the focus was mainly on field validation at the form level but the workflow can be modelled to have approvals, multiple approvals and approval loops and that can be built in.
