

WEBINAR Q&A:

Simplify Master Data Maintenance in SAP Using Excel

Thursday 24th May 2018

I'm from a regulated pharmaceutical industry. Do you support MAT1 - Product Master or mass load/changes in APO, like with ECC MM01/MM02/MM17?

We are an application where you can automate the transactions, irrespective of the industry you work in. We do have customers in all sectors including those that are regulated.

Any T-Code in an ABAP based system is supported, which would include MM01, MM02, MM17 etc.

Does the excel add-in communicate with the transactions directly, or there is a custom transaction?

The add-in communicates directly with the Transaction Code. We use the RFC layer to connect to SAP.

Does Winshuttle work with SuccessFactors?

Not at the moment, but we do have that in our roadmap.

In which language is the add-in written?

It is built using the .NET framework.

Thank you for attending the webinar. Please contact us if you have any further questions.
